Summary

Computer Science Engineering student with a 4.74/5.0 GPA. Builds engineering systems across AI/data, backend/web, cloud infrastructure, and cybersecurity, with evidence such as validation-only model decisions, deterministic analysis, access controls, test results, and documented operating limits.

Skills

Languages: Python, C#, TypeScript, JavaScript, SQL, Bash

AI & Data: scikit-learn, pandas, NumPy, SHAP, RAG, Qdrant, Redis, semantic retrieval, model evaluation

Software & Web: .NET 9, ASP.NET Core, Entity Framework Core, React, Next.js, FastAPI, Flask, REST APIs, Supabase, PostgreSQL, SQLite, MySQL

Cloud & Security: Linux/Ubuntu, Azure VM, Nginx, Docker Compose, Git/GitHub, TCP/IP, DNS, TLS, PCAP analysis, validation and testing

Research & Training

AI Squad - Campus Copilot Research Project

Budapest, Hungary

Research Contributor | Óbuda University

2026

- Co-authored research and architecture for a GDPR-aware university RAG assistant and presented design trade-offs to a faculty jury.
- Designed hybrid BM25 + dense retrieval with Qdrant filtering, Reciprocal Rank Fusion, RBAC, PII scanning, prompt-injection detection, semantic caching, and human escalation.

Cybersecurity & Compliance Engineering Bootcamp

Budapest, Hungary

Selected Participant | Óbuda University and CCLab

Summer 2026 - Present

- Selected among the programme's top 10 students for a 280-hour programme in ethical hacking, secure development, networking, and security evaluation.
- Studying Common Criteria, IEC 62443, ETSI EN 303 645, and EU Cyber Resilience Act requirements.

Selected Projects

Explainable AI-Powered Fraud Detection | [GitHub](#)

Python, pandas, NumPy, scikit-learn, Random Forest, Logistic Regression

- Validated 284,807 transactions, removed 1,081 duplicates, and preserved isolated train, validation, and test splits.
- Used validation-only threshold selection to achieve 95.7% precision and 0.805 F1 on untouched test data.

Deep Packet Inspection System | [GitHub](#)

Python, PCAP, TCP/IP, TLS, DNS, HTTP, multithreading

- Built authorised offline PCAP analysis with custom Ethernet, IPv4, TCP, UDP, TLS SNI, HTTP Host, and DNS parsers.
- Classified 20+ services with a multithreaded pipeline and five-tuple flow affinity; validated with 90 automated tests.

DevLab - Self-Hosted Development Environment | [GitHub](#)

Azure VM, Ubuntu Server, Gitea, Nginx, Flask, Bash, dnsmasq, Netdata

- Built an Azure-hosted Ubuntu environment integrating Gitea, Nginx, Flask, internal DNS, and monitoring.
- Secured access with Azure NSG, UFW, SSH keys, and TLS; automated nightly Bash/rsync backups.

UserHub - User Management System | [GitHub](#)

ASP.NET Core 9, Entity Framework Core, SQLite, JavaScript

- Built 5 RESTful CRUD endpoints with validation, error handling, server-enforced email uniqueness, migrations, and seed data.
- Developed a responsive SPA with real-time search, sorting, table/card views, and toast feedback.

Education

Óbuda University - John von Neumann Faculty of Informatics

Budapest, Hungary

BSc Computer Science Engineering

Sep 2024 - Feb 2028 (expected)

- GPA: 4.74/5.00 | Stipendium Hungaricum Scholar | Relevant coursework: Data Structures & Algorithms, Artificial Intelligence, Databases, Operating Systems, and Computer Networks.

PACI - Punjab Artificial Intelligence & Cybersecurity Initiative

Pakistan

Cybersecurity Specialization (18 months)

15 Aug 2026 - Present

- Currently studying networking, secure architecture, offensive testing, intelligence gathering, forensics, malware analysis, and monitored defense operations.

Prishtina International Summer University - University of Prishtina

Prishtina, Kosovo

DX: Digital Transformation for Business - MCP-Based RAG

Jul 2026

- Earned Grade A and 4 ECTS in a 92-hour course covering digital transformation, predictive analytics, MCP, RAG, and AI agents.

International Summer School Prizren (ISSP)

Prizren, Kosovo

Artificial Intelligence & Human-Machine Interaction

Jul - Aug 2025

- Earned a final grade of 10/10; built and presented an explainable cybersecurity salary-prediction dashboard.

Leadership

Mentor - Stipendium Hungaricum Programme (HÖÖK)

Budapest, Hungary

Óbuda University

Jul 2025 - Present

- Guided onboarding and academic administration for 20+ international students across university systems and services.
- Resolved academic and IT roadblocks through structured troubleshooting and documented recurring support issues with university stakeholders.

Co-organizer - Pages & People Book Reading Community

Budapest, Hungary

Óbuda University

Nov 2025 - Present

- Organized recurring English-language discussions and managed outreach, logistics, scheduling, attendance, and communication.
- Built a 30+ active-member community and documented stakeholder maps, risks, KPIs, and post-event evaluation.

Awards & Recognition

National Higher Education Scholarship (NFÖ): Ranked 3rd in Óbuda University's proposed 2026/27 ranking.

3rd Place, Aruba Cloud Hackathon: Contributed to a cloud-native early-warning platform in a 24-hour team hackathon.

Best Student Project (2026): Pages & People initiative, featured in the incoming freshman brochure.
